

Aqara Home works with Amazon Echo. You can use Alexa to control your smart home devices, like a LED Light Bulb, your Temperature and Humidity Sensor, Door and Window Sensor, and Motion Sensor. You can build fun accessories combinations and synced it with Amazon Echo.

GET STARTED

1. Download Aqara Home app and create an account.
2. Download Amazon Alexa App and **Set up your Amazon Alexa device.**

CONNECT AMAZON ALEXA WITH AQARA HOME

In the Alexa app:

1. From the menu, select **Skills & Games**
2. Search **Aqara Home Skill**
3. Enter **“Aqara Home”** in the search field
4. Select **Enable to use** for Aqara Home
5. Log in using your Aqara Home account
6. If successfully paired, the following message will appear: **“Aqara Home has been successfully linked”**
7. Press **“x”** to close the window

DISCOVER DEVICES WITH AMAZON ALEXA

After Amazon Alexa have access to your Aqara Home Devices and Scenes. It needs to “discover” or locate the Devices and Scenes.

In Amazon Alexa app:

1. After successfully linking Aqara Home with Alexa, go to **Discover Devices**
2. Wait for the app to finish detecting your devices.

If Alexa does not discover any devices:

On Amazon Alexa app, go to **Devices** (the home icon in the bottom right)

1. Press the **“+”** icon
2. Select **Add Device**
3. Go to **Hub – Other – Discover Devices**
4. Wait for the app to finish detecting your devices.

This may take up to 45 seconds.

When detection is complete, it will list all the **Devices** and **Scenes** in the **Smart Home Devices** (home icon in the bottom right) section in the app.

Now you’re done with the set up and ready to use Alexa’s hands-free voice control for your Aqara devices.

Note: At this time, Alexa can support Aqara LED Light Bulb, Temperature and Humidity Sensor, Door and Window Sensor, and Motion Sensor. Your existing Scenes may not work if the device is not supported.

ADD NEW DEVICES, SCENES OR ROUTINES TO AMAZON ALEXA

By default, Alexa receives all permissions to access to your Aqara Home devices when you log into your Aqara Home account on Amazon Alexa app. When you add new devices, Alexa will automatically pair up. You can also simply ask: *“Alexa, discover my devices”* and wait for the app to finish detecting. You’ll then be able to control your new Aqara devices through Alexa immediately. In the Aqara Home App:

∅ Add new devices:

1. From the Home screen, press (+) button.
2. Select the device to add.
3. Follow the instructions in the app to successfully connect it with Aqara Home.
4. The device will appear in the list of connected devices on Amazon Alexa’s.
5. You can also ask: *“Alexa, discover new devices.”*
6. And wait for Alexa to complete device detection.

∅ Add a new scene:

1. From the Home screen, press (+) button.
2. Press Add, select your devices.
3. Press **test this scene**, input the scene name and save.
4. On Amazon Alexa App, from the **Devices** screen, select **Scenes** then **Discover Scenes**.
5. Press **Done**.

∅ Add new Routines:

1. From the **Menu**, press **Routines**.
2. Press (+) to create a **New Routine**.
3. Select **“When this happens”** then (+), choose the device and set the condition
4. On **“Anytime”**, to set the time you want.
5. Choose **“Add action”** and select the reaction from Alexa or the other devices
6. **Save**

DISCONNECT AQARA HOME FROM AMAZON ALEXA

Note: After unpairing Alexa and Aqara Home, your Amazon Alexa device will no longer accept voice commands from Aqara Home devices or Scenes.

In the Amazon Alexa App:

1. Go to **Menu** (on the top left)
2. Select **Skills & Games**
3. Select **Your Skills**, and press **Aqara Home**
4. Choose **Disable Skill**
5. Press **DISABLE**
